

## Pure Heating

**ThermoSiv Ltd.**      [www.thermosiv.com](http://www.thermosiv.com)

ThermoSiv (established 2003) provides competitive heating solutions based on its unique flexible heating fabric. The proprietary technology, derived from aerospace industry, allows production of ultra flexible, cost-effective heating elements, delivering exceptional comfort, safety and energy saving.

*In "Z. Island by DuPont™ Corian®" project, the central cooking area includes a heating plate to keep food warm. This innovative element is powered by the ThermoSiv non-metallic heating fabric, "sandwiched" seamlessly between two thin pieces of Corian®.*

ThermoSiv flexible heating elements can be cut, drilled and sewed. They can be configured to heat up to 120°C / 248°F, and operate off batteries (3.6V+), 12/24V and 110/220V - without hazardous electro-magnetic radiation.

The unique properties of the fabric enable to integrate it competitively in a wide range of applications and markets such as domestic heating, automotive, and outdoor gear.

The company headquarters are located in Israel, with a worldwide distribution network.
